3rd grade
O.J. Semmes Elementary

Are we alone in this colossal galaxy? If you think about it there are not just animals and human beings. There must be something else outside or on this very earth hiding from us or in our very sight. Our eyes just can't magnify the hiding human intelligence called

aliens. Outside this great world scientist and the N.A.S.A space program. They are trying to find aliens on mars but they just have not tried to search on our great planet earth. Scientist has got many photographs of these weird aliens, but no evidence. I wonder if they are real. Or is it just people's imagination? If they are out there playing hide and go seek with us, why are they hiding or are they just trying to know what we are as we are trying to know what they are. If they are living out there are they trying to say something to us? If they are, what are they saying? Scientist is trying

to study these magnificent creatures and how they build those crafty models of spacecraft. Their spacecraft is unique, it is one of a kind, but for them it is not, it is easy to make for them. Scientist had observed this spacecraft and found that it would take one billion years to make. The aliens look like green, big eyed, humans but just have three fingers on their hand and three toes on their feet. They are smarter than human beings they are smarter than anything. If they are out there please find them out there somewhere.
